

Boxu

Genre:

- Stealth strategy, Real Time Tactics (RTT)

Target Audience

- 13+, an audience who enjoys strategic thinking and planning over fast paced action.

Gameplay and mechanics

- 2D Top down stealth game where the player navigates through guarded environments without being detected.
- Each mission begins with a randomized alert level, affecting the number of guards present. A higher alert level increases guard presence and reduces the margin for error through a suspicion meter.
- Guards have a visible vision cone, but a hidden hearing range. This encourages experimentation by the player and never fully drops their guard.

Player's goal:

- Complete the objective and extract in the shortest amount of time with the lowest alert and suspicion level as possible. (A -> B -> C)

Key/Core features:

- 2 – 3 preset patrol variations
- Slightly different starting alert values
- Suspicion system that dynamically increases difficulty
- Vision based stealth gameplay
- No combat, enemy capturing player results in failure
- Optional difficulty modes with reduced visual assistance (hides guard vision cones).

UI design:

- Minimalistic interface to maintain immersion, such as alert meter, suspicion meter, optional mini map or directional guidance.

Unique selling point:

- Pure stealth gameplay with no combat
- High tension where every mistake matters
- Replay ability through randomized scenarios
- Focus on player awareness, memory, and precision
